Secure Your Device or App Data With CorrStat™

Zero-Knowledge System

Secure data transfer

Data stored in user's own account under their control

Analytics API provides instant value

Security infused architecture

No infrastructure speeds development

Surpasses HIPAA and ISO 27001

The most economical way to secure
health, telematics, and application data over Mobile-to-Mobile or Internet connections.

Advantages

Faster product development

Lower operational costs

Reduced liability

Increased functionality

Increased customer satisfaction

New patient care options and flexibility

Security!

Applications

**M2M and IoT devices**

mHealth

Medical Devices

Remote patient monitoring

Telematics

Smartphone Apps

Wearables

CorrStat Ecosystem

Where do you fit?

CorrStat is an interactive platform that allows people to share their health and lifestyle data while protecting the individual's privacy. This unique platform and its data engines allow third-party apps and devices to interact with CorrStat members' data in real time. Data connections over M2M networks or the Internet terminate at the CorrStat platform.

CorrStat is the data repository for mobile health Apps or device data. mHealth and medical device developers are spared the expense of storing and securing the data their app collects. CorrStat also provides a rich environment that allows developers to extend their application. CorrStat is available to everyone via the CorrStat web site, mobile Apps and to medical devices connected via M2M networks. The data remains under the control of the CorrStat member.
